

# Hotel Room Booking Form

## Basic Fields — Step-by-Step Zoho Creator Guide

**Assignment 03** • Hotel Room Booking & Front Office Management

This PDF turns the uploaded assignment into a simple click-by-click implementation guide and includes real Zoho Creator interface examples for orientation.

**Required:** Room\_Booking\_Form + Room\_Booking\_Report + all 13 Basic Fields + validation rules + sample records.

The assignment specifically requires all thirteen Basic Fields and a screenshot-based lab record. ■filecite■turn7file0■L3-L8■

# 1. Real Zoho Creator UI Examples

Use these real Creator screens to recognize the application/form/report editing environment. Your final submission should use screenshots from your own Hotel Room Booking app.

## Example 1 — Creator application area

Use this type of application/editing area before opening the Form Builder.

## Example 2 — Report area

Your assignment's Room\_Booking\_Report should eventually show submitted booking records.

## 2. More Real Creator Examples

### Example 3 — Form Builder / configuration area

The screenshot shows the 'Room\_Booking\_Form' configuration interface. On the left is a dark sidebar with a menu containing 'Home', 'All Lead Kanban', 'All Sales View', 'Add New Lead', 'Room\_Booking\_Form' (expanded), 'Room\_Booking\_Form', and 'Room\_Booking\_Form Report'. The main area displays the form fields for the 'Room\_Booking\_Form'. The fields are: 'Guest\_name' (split into 'First Name' and 'Last Name'), 'Email\_address', 'Permanent Address' (split into 'Address Line 1' and 'Address Line 2'), 'City / District' and 'State / Province' (both dropdowns), 'Postal Code' and 'Country' (both dropdowns), 'Contact\_Number' (with a country code dropdown set to '+91' and a text field containing '81234 56789'), 'ID\_Proof\_Number', and 'Special\_Requests'.

This is the type of Creator editing interface where you configure form fields.

### Example 4 — Creator page/application view

The screenshot shows the 'Sales Dashboard' application view. The top bar includes 'My first Creator app', 'Sales Dashboard', and a 'Done' button. The left sidebar contains a menu with 'Panel', 'Board', 'Chart', 'Gauge', 'Search', 'Form', 'Report', 'Snippets', and 'Button'. The main area displays a dashboard layout. At the top is a 'Welcome to Your Sales Management App' message. Below this are three cards: 'All Leads' (labeled 'Ct ()'), 'Closed Won Leads' (labeled 'Ct ()'), and 'Closed Lost' (labeled 'Ct ()'). Below these are two charts: a 'Funnel - Add New Lead' and a 'Pie - Add New Lead'. At the bottom is a 'Closed Won Leads' section with a table. The table has 5 columns and 4 rows. The bottom bar includes 'Trial has expired | Upgrade' and 'Help'.

These images are interface references; they are not substitutes for the screenshots required from your own app.

### 3. Create the Application and Form

Application name: **Hotel Room Booking & Front Office Management**

Form name: **Room\_Booking\_Form**

Report: **Room\_Booking\_Report**

#### Step-by-step

1. Open Zoho Creator and open/create the Hotel Room Booking & Front Office Management application.
2. Go to **Create New** → **Form** (wording may vary slightly in the current Creator UI).
3. Name the form **Room\_Booking\_Form**.
4. Open the Form Builder and drag the required field types from the palette into the form.
5. Rename each field exactly as specified in the assignment.
6. Organize the fields into the four sections shown on page 3 of the assignment.

The assignment defines the form and report names and identifies guests/front-office staff as the primary users. ■filecite■turn7file0■L18-L24■

## 4. Add All 13 Basic Fields

Create the following fields. Keep the field names exactly as listed because later report/workflow steps depend on them.

| Basic Field  | Field Name              | Sample Value                             |
|--------------|-------------------------|------------------------------------------|
| Name         | Guest_Name              | Anitha Selvam                            |
| Email        | Email_Address           | anitha.selvam@example.com                |
| Address      | Permanent_Address       | 31, Park Road, Coimbatore, TN, 641002    |
| Phone        | Contact_Number          | +91 99000 44556                          |
| Single Line  | ID_Proof_Number         | Aadhaar: 1234 5678 9012                  |
| Multi Line   | Special_Requests        | Higher floor; away from elevator         |
| Number       | Number_Of_Guests        | 3                                        |
| Date         | Check_In_Date           | 02-Aug-2026                              |
| Time         | Preferred_Checkin_Time  | 1:00 PM                                  |
| Drop Down    | Room_Type               | Deluxe Double Room                       |
| Radio        | Meal_Plan               | Breakfast Included                       |
| Multi Select | Amenities_Required      | Extra Bed, Airport Pickup, Late Checkout |
| Checkbox     | Agree_To_Hotel_Policies | Checked                                  |

The complete field mapping comes from page 2 of the assignment. ■filecite■turn7file0■L50-L103■

## 5. Arrange the Form into 4 Sections

### Section A — Guest Details

- Guest Name (First Name, Last Name)
- ID Proof Number
- Number of Guests

### Section B — Contact Details

- Email Address
- Contact Number
- Permanent Address

### Section C — Room & Stay Preferences

- Room Type
- Meal Plan
- Amenities Required
- Special Requests

### Section D — Scheduling & Policy Acknowledgement

- Check-In Date
- Preferred Check-in Time
- I agree to the hotel's policies and cancellation terms

These four sections are specified by the assignment on page 3. ■filecite■turn7file0■L112-L124■

**Quick tip:** In Form Builder, use section/layout controls to make the form easier for guests to complete. Do not change the field names just to make the labels shorter.

## 6. Configure Validation Rules

Set these validations before testing the form:

1. Make **Guest Name**, **Phone**, **ID Proof Number**, **Number of Guests**, **Room Type**, **Check-In Date**, and **Policy Checkbox** mandatory.
2. Keep built-in email format validation enabled for **Email\_Address**.
3. Configure the phone field for Indian country-code format.
4. Restrict **Number\_Of\_Guests** to values from **1 to 6**.
5. Prevent **Check\_In\_Date** from accepting past dates.
6. Prevent submission unless **Agree\_To\_Hotel\_Policies** is checked.

These exact validation requirements are specified on page 3 of the uploaded assignment. ■filecite■turn7file0■L125-L132■

**Test:** Try submitting an invalid email, 0 guests, a past date, and an unchecked policy box. Each should be rejected by the corresponding validation.

## 7. Create the Room\_Booking\_Report

### Step-by-step

1. Save the Room\_Booking\_Form.
2. Open the application's **Reports** area.
3. Create a report based on **Room\_Booking\_Form**.
4. Name the report **Room\_Booking\_Report**.
5. Choose a simple list/table report for the lab record.
6. Make sure important booking fields are visible, especially Guest\_Name, Contact\_Number, Room\_Type, Check\_In\_Date, Preferred\_Checkin\_Time, and amenities/preferences.
7. Submit at least three sample bookings and confirm that the report contains all three records.

The assignment says the report is the list of all submitted booking requests and is used by front office to filter by Room Type and Check-In Date.

■filecite■turn7file0■L18-L24■

## 8. Final Test Workflow

1. Open the live/public form preview.
2. Fill all four sections using valid sample data.
3. Submit the form.
4. Verify that a new record appears in Room\_Booking\_Report.
5. Repeat until at least three sample records are visible.
6. Check that the report can be filtered by Room Type and Check-In Date.
7. Verify that the form layout and validations work correctly.

The assignment's workflow summary says submission validates the fields, creates a record in Room\_Booking\_Report, and the front office uses the report for room preparation. ■filecite■turn7file0■L133-L143■

## 9. Lab Record Screenshot Checklist

Your assignment requires a screenshot-based lab record containing:

- **Form Builder screenshot** — all 13 Basic Fields visible.
- **Live preview screenshot** — the completed Room\_Booking\_Form.
- **Report screenshot** — at least three submitted records in Room\_Booking\_Report.
- **Validation screenshots** if your faculty asks for evidence of configuration.

The official deliverable requirement is explicitly stated on page 4. ■filecite■turn7file0■L152-L156■

**Important:** The four Zoho UI examples earlier in this PDF are for learning where things are located. For your submission, capture your own application's screens so the evaluator can see that you actually built the assignment.

Expected learning outcomes include understanding Basic Fields, structuring the form into logical sections, configuring mandatory/format/range validation, and understanding how form values feed into reports. ■filecite■turn7file0■L146-L151■

## 10. Quick Reference — 13 Fields

**Guest Details:** Guest\_Name • ID\_Proof\_Number • Number\_Of\_Guests

**Contact:** Email\_Address • Contact\_Number • Permanent\_Address

**Room/Stay:** Room\_Type • Meal\_Plan • Amenities\_Required • Special\_Requests

**Schedule/Policy:** Check\_In\_Date • Preferred\_Checkin\_Time • Agree\_To\_Hotel\_Policies

**Minimum validation:** required fields + valid email + Indian phone format + guests 1–6 + no past check-in date + policy checkbox required.

**Final names to remember:**

Form → Room\_Booking\_Form

Report → Room\_Booking\_Report

This matches the terminology and organization of the uploaded assignment rather than replacing it with a different hotel-booking design.
