EX.NO: 04

Application Using Zia – Library Management System

Department of Computer Science and Engineering
NAME: Pranav Narayanan.T
ROLL NO: 240701393

AIM

To build a Library Management System in Zoho Creator with the help of Zia, the AI assistant, for organizing books, members, loans, reservations, fines, genres, publishers, and related records.

PROCEDURE

1. Sign in to Zoho Creator and select Create Application.

2. Choose the Zia (AI) application-generation option and provide a prompt describing a Library Management System.

3. Review the suggested modules—Books, Members, Loans, Reservations, Fine Records, Loan Histories, Genres, and Publishers—and confirm the application generation.

4. Open the generated application and inspect the forms and fields. The Loan form includes Loan ID, Book, Member, Issue Date, Due Date, Return Date, Fine Amount, and Loan Status.

5. Add sample data through the relevant forms for books, publishers, genres, loans, reservations, and loan histories.

6. Verify the generated reports, including All Loans, All Books, All Loan Histories, All Publishers, and Fine Records.

7. Check the Kanban views, such as Loan Statuses and Books Board, to see records grouped by status or genre.

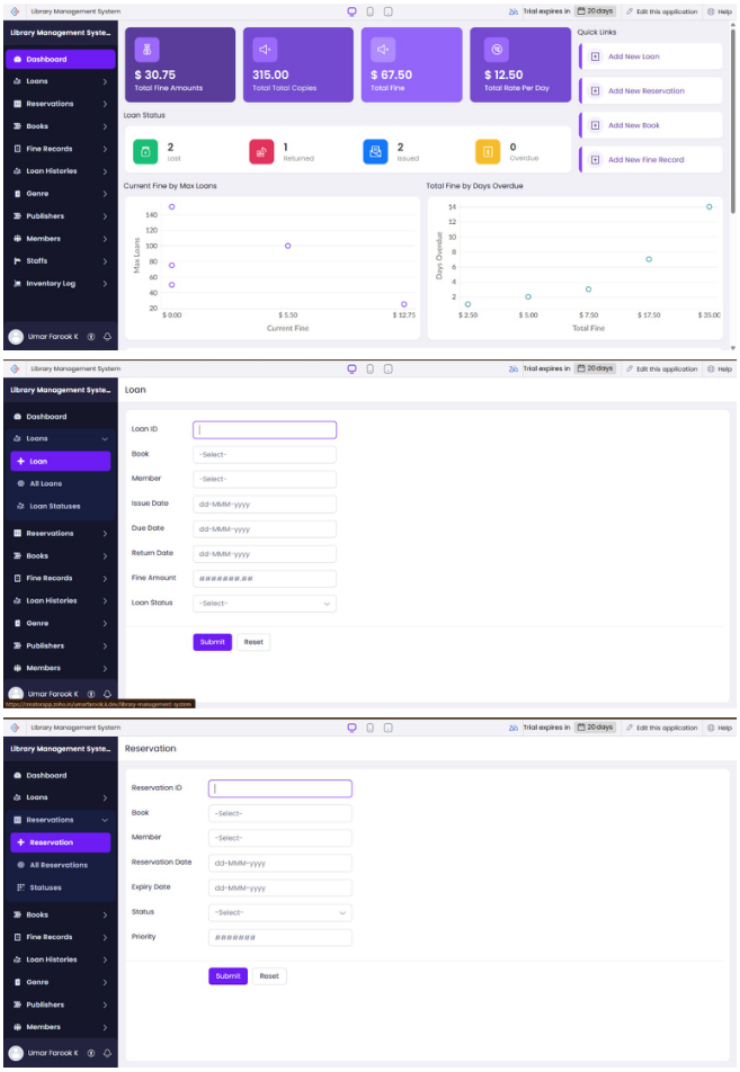

8. Open the Dashboard and review the fine summary, total copies, loan-status counts, charts, and quick links.

9. Save the application and capture screenshots of the forms, reports, Kanban views, and dashboard.

OUTPUT

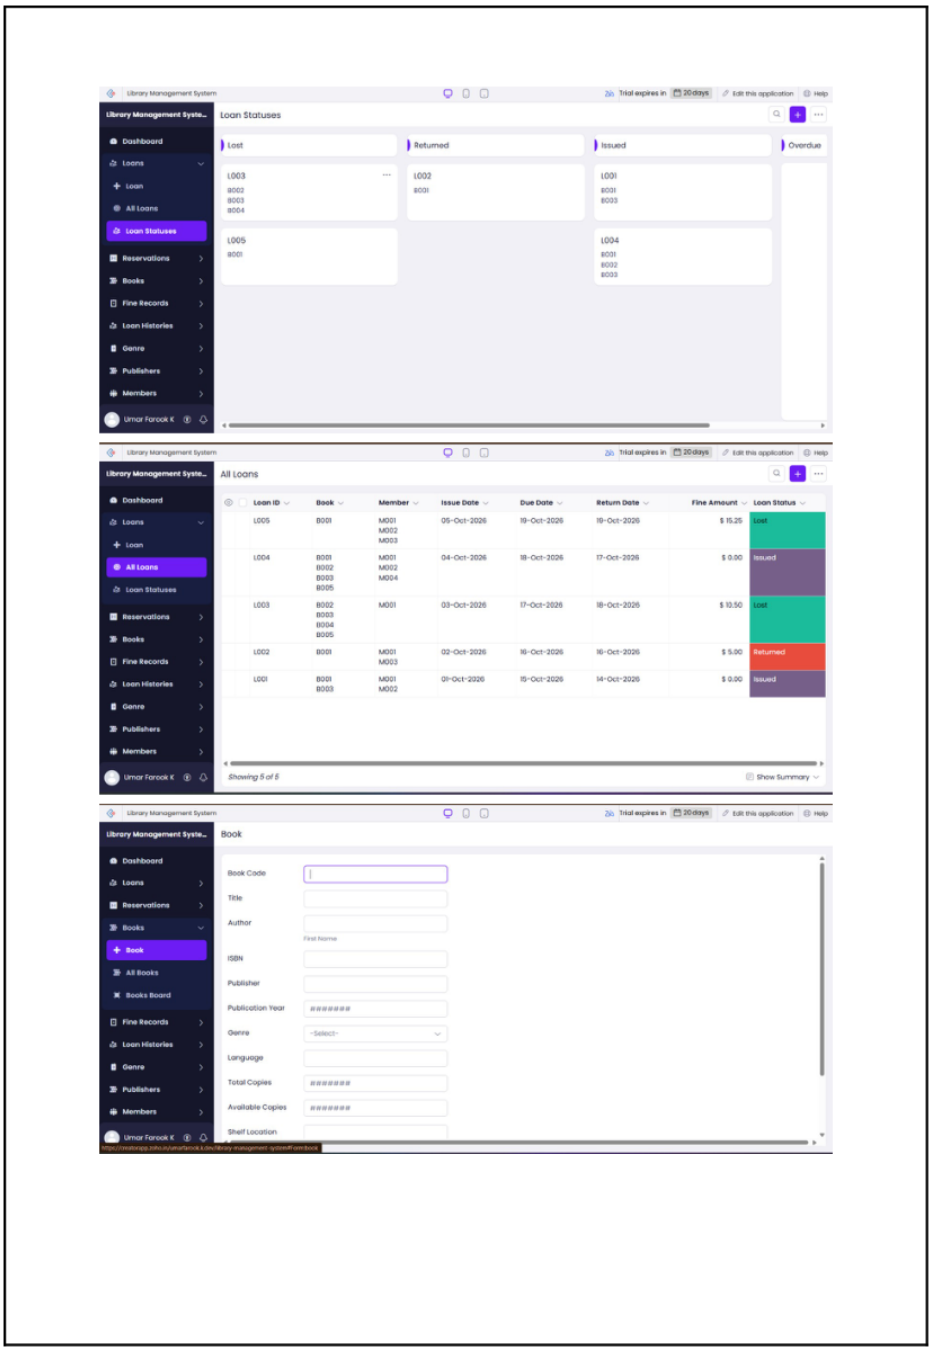

Output 1 – Dashboard and Loan/Reservation Forms

The dashboard provides a summary of total fine amounts, total book copies, total fines, and the fine rate per day. It also presents loan-status counts, charts for fines, and quick links for creating a loan, reservation, book, or fine record. The Loan and Reservation forms collect the identifiers, book and member references, relevant dates, status, and priority details.

Output 2 – Loan Statuses and All Loans

The Loan Statuses Kanban view groups loans into Lost, Returned, Issued, and Overdue columns. The All Loans report displays each loan's book, member, issue date, due date, return date, fine amount, and loan status. The Book form captures book code, title, author, ISBN, publisher, publication year, genre, language, total copies, and available copies.

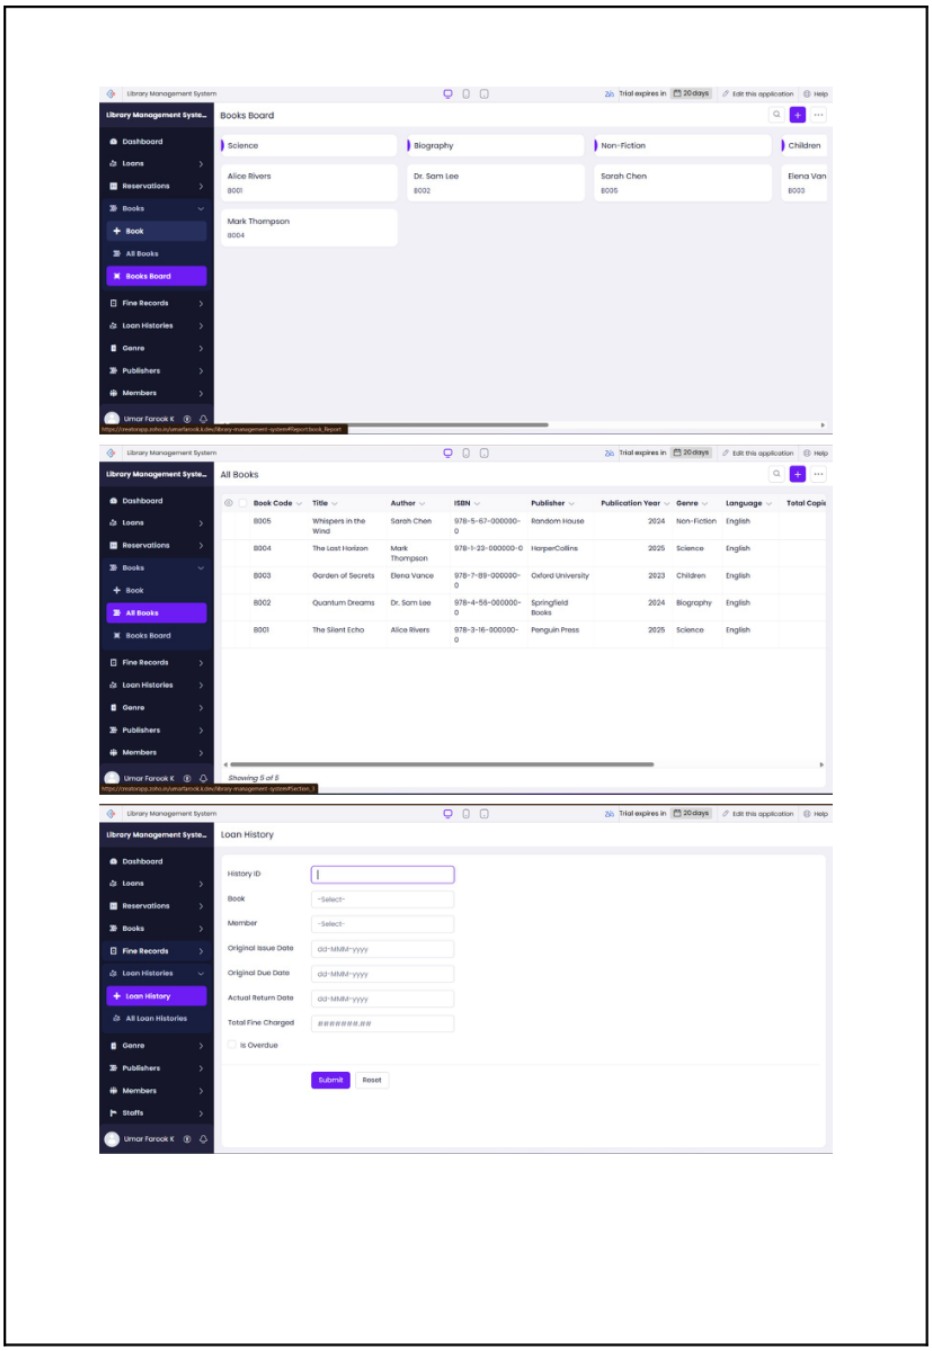

Output 3 – Reservation Statuses, Reservations, and Fine Record

The Statuses Kanban view groups reservations into Fulfilled, Confirmed, Cancelled, and Pending. The All Reservations report lists reservation ID, book, member, reservation date, expiry date, status, and priority. The Fine Record form captures fine ID, loan, calculation date, overdue days, rate per day, total fine, payment status, and payment date.

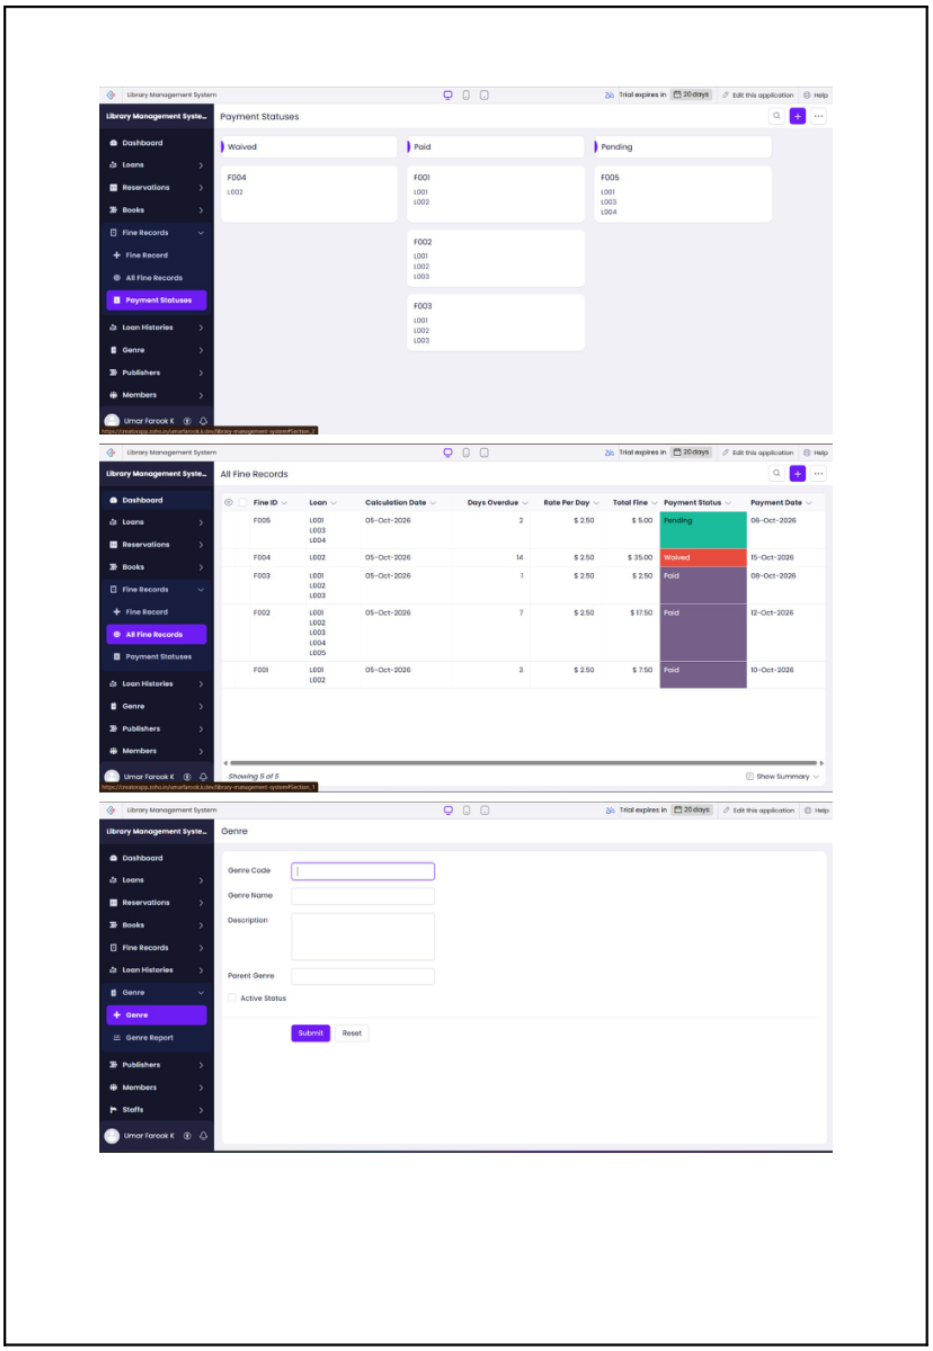

Output 4 – Books Board, All Books, and Loan History

The Books Board groups books by genre, including Science, Biography, Non-fiction, and Children. The All Books report shows book details such as title, author, ISBN, publisher, publication year, genre, and language. The Loan History form stores original issue and due dates, actual return date, total fine charged, and whether the loan was overdue.

Output 5 – Payment Statuses, Fine Records, Genre, and Reports

The Payment Statuses view groups fine records by Waived, Paid, and Pending. The All Fine Records report displays loan, calculation date, overdue days, rate per day, total fine, payment status, and payment date. The Genre form stores genre code, name, description, parent genre, and active status. The remaining screenshots show loan-history reports, genre reports, publishers, and the Publisher form.

RESULT

Thus, a Library Management System application was generated in Zoho Creator using Zia. Its forms, reports, Kanban views, and dashboard were reviewed, and the generated application structure was verified.
