

Hotel Command Center Page

Zoho Creator — Step-by-Step Build Guide + Visual Examples

Based on the uploaded Assignment 03: **Hotel Booking Command Center — Page Elements Use Case.**

What you have to build

Create one internal Zoho Creator Page named **Hotel_Command_Center_Page** using all eleven required Page Builder elements: Panel, Board, Chart, Gauge, Search, Form, Report, Snippets, Button, Widgets, and Viewer. The assignment specifies that the page is a single front-office command center for the existing hotel booking application.

The source assignment explicitly lists the page name, users, underlying form/report, and objective on page 1. ■filecite■turn5file0■L21-L28■

1. Final Page Layout — copy this structure

Section	Put these elements here
Overview Strip	Occupancy_Rate_Gauge • RoomType_Popularity_Chart_Widget • Guest_Search_Bar
Processing Workspace	Send_Checkin_Reminder_Button • Booking_Status_Board
Detailed Data	Full_Bookings_Report
Reference & Quick Actions (Sidebar)	Hotel_Policy_Snippet • Guest_ID_Document_Viewer • Quick_Walkin_Booking_Form
Operations Strip	Housekeeping_And_Arrivals_Widgets
Outer container	Command_Center_Main_Panel wraps the whole page

The assignment's page-layout section places the Gauge, Chart and Search in Section 1; Button and Board in Section 2; Report in Section 3; Snippet, Viewer and Form in the sidebar; and Widgets in Section 5. ■filecite■turn5file0■L142-L159■

2. Visual Example from Your Assignment

The following are screenshots rendered directly from your uploaded assignment. They are useful as a checklist for what the finished page must contain.

Assignment page 2 — element mapping table

Assignment – 03

Hotel Booking Command Center — Page Elements Use Case

1. Objective

To design and build a single internal "Command Center" Page in Zoho Creator for the existing "Hotel Room Booking" application, demonstrating the correct usage of all eleven Page Builder elements — Panel, Board, Chart, Gauge, Search, Form, Report, Snippets, Button, Widgets, and Viewer — so that the hotel's front office and management have one unified workspace to monitor, manage, and act on booking data.

2. Problem Statement

The hotel's front office currently checks booking status through the default form report, but this gives no quick visual sense of tonight's occupancy rate, no easy way to search for a specific guest's booking during a busy check-in rush, no drag-and-drop way to move bookings through processing stages, and no single place to view a guest's ID proof document. Staff waste time switching between the report, the housekeeping register, and shared folders just to serve a single guest.

Design a single internal Page in Zoho Creator that acts as the front office's command center for hotel operations, combining live data, quick actions, and reference material, using every Page Builder element Zoho Creator provides, so that staff can monitor and manage the entire booking lifecycle from one screen.

3. Scope of the Use Case

- Application Name: Hotel Room Booking & Front Office Management
- Page Name: Hotel_Command_Center_Page
- Primary Users: Hotel Front Office Staff, Manager, Housekeeping Supervisor
- Underlying Form/Report: Room_Booking_Form, Room_Booking_Report, RoomType_Popularity_Chart
- Objective of the Page: Provide a single internal workspace that combines monitoring, searching, processing, and reference material for hotel bookings

4. Page Elements Used and Their Mapping

The table below maps every Page Builder element available in Zoho Creator to its role on the Hotel_Command_Center_Page.

Page Element	Element Name	Purpose	Placement on Page
Panel	Command_Center_Main_Panel	Acts as the primary structural container that groups all other elements into one cohesive dashboard	Wraps the entire page as the outer layout container

Page Element	Element Name	Purpose	Placement on Page
Board	Booking_Status_Board	Provides a Kanban-style board so front-office staff can drag bookings between processing stages	Central column: columns for Enquiry, Confirmed, Checked-In, Checked-Out
Chart	RoomType_Popularity_Chart_Widget	Visualizes live booking counts per room type as a bar chart	Top-right area, next to the Gauge
Gauge	Occupancy_Rate_Gauge	Displays tonight's occupancy rate as a circular gauge (e.g., 45 of 60 rooms occupied)	Top-left area, first element the duty manager sees on opening the page
Search	Guest_Search_Bar	Lets staff instantly look up a specific guest's booking by name, phone number, or booking ID	Fixed at the top of the page, above the Board
Form	Quick_Walkin_Booking_Form	Embeds the Room_Booking_Form for front-office staff to register walk-in guests directly from the command center	Right-hand panel, accessible via a tab or expandable section
Report	Full_Bookings_Report	Embeds the complete Room_Booking_Report for detailed row-level review and export	Lower section of the page, below the Board
Snippets	Hotel_Policy_Snippet	Reuses a pre-built content snippet (check-in/check-out policy and cancellation terms) that is shared across the booking form, this page, and confirmation emails	Sidebar, as quick-reference text for staff handling guest queries
Button	Send_Checkin_Reminder_Button	Provides a one-click action button to trigger check-in reminder emails to guests arriving today	Placed directly above the Booking Status Board, near the Confirmed column
Widgets	Housekeeping_And_Arrivals_Widgets	Displays a small gallery of supporting widgets — live housekeeping status and today's arrivals/departures list — for staff coordination	Bottom strip of the page, below the Full Bookings Report

3. Build It in Zoho Creator — exact order

Step 1 — Open the application. Open your existing Hotel Room Booking & Front Office Management application.

Step 2 — Create the Page. In the application builder, create a new Page from blank and name it **Hotel_Command_Center_Page**.

Step 3 — Add the Panel first. Drag a Panel onto the page and use it as the outer container. Name it **Command_Center_Main_Panel**.

Step 4 — Add Gauge. Add a Gauge at the top-left. Name it **Occupancy_Rate_Gauge**. Configure it to show tonight's occupancy rate, e.g. occupied rooms out of total rooms.

Step 5 — Add Chart. Add a bar chart at the top-right. Name it **RoomType_Popularity_Chart_Widget**. Use room type as the category and booking count as the value.

Step 6 — Add Search. Put **Guest_Search_Bar** above the Board. Configure it to search Guest Name, Contact Number and Booking ID simultaneously.

Step 7 — Add Button. Place **Send_Checkin_Reminder_Button** above/near the Board. The assignment says it should trigger reminder emails only for guests whose Check-In Date is today.

Step 8 — Add Board. Add **Booking_Status_Board** in the center. Map columns to Enquiry, Confirmed, Checked-In and Checked-Out. Dragging a card must update the Status field.

Step 9 — Add Report. Add **Full_Bookings_Report** below the Board and connect it to Room_Booking_Report.

Step 10 — Add Snippet. Put **Hotel_Policy_Snippet** in the sidebar with check-in/check-out and cancellation policy text.

Step 11 — Add Viewer. Put **Guest_ID_Document_Viewer** below the policy snippet so staff can view the latest uploaded ID proof.

Step 12 — Add Form. Put **Quick_Walkin_Booking_Form** in the sidebar as an expandable/tabbed section, using the existing Room_Booking_Form.

Step 13 — Add Widgets. At the bottom, add **Housekeeping_And_Arrivals_Widgets** showing housekeeping status and today's arrivals/departures.

Step 14 — Save/Done. Check the page in live mode and verify every element is visible and working.

The current Zoho Creator Page Builder is a drag-and-drop workspace for panels, boards, charts, gauges, search, forms, reports, snippets, buttons and widgets. ■cite■turn0search0■

4. Configuration You Must Not Forget

Element	Required configuration
Panel	Role-based visibility for front-office and manager accounts.
Board	Columns: Enquiry / Confirmed / Checked-In / Checked-Out; drag changes Status.
Chart	Auto-refresh at a fixed interval.
Gauge	Show occupancy; total room inventory is configurable.
Search	Search Guest Name + Contact Number + Booking ID.
Form	Same validation rules as Room_Booking_Form.
Report	Manager-level accounts only for Excel export.
Snippets	Central reusable hotel policy content.
Button	Email reminders only to guests checking in today.
Widgets	Real-time housekeeping + today's arrivals/departures.
Viewer	Show the latest uploaded ID proof.

5. Real Zoho Creator Visual References

These are **official Zoho Creator screenshots/examples** from Zoho's documentation. They are not screenshots of your hotel application; use them to recognize the real Creator Page Builder controls and configuration screens.

Example A — Create a new Page: Zoho's quickstart shows the Page option when creating a new component.

Official image: <https://www.zohowebstatic.com/sites/zweb/images/creator/quickstart-guide/create-new-page-zoho-creator.png>

Example B — Page Builder element palette: Zoho's example shows the left-side elements including Panel, Chart, Gauge, Search, Form, Report, Snippets, Button and Widgets.

Official image: <https://www.zohowebstatic.com/sites/zweb/images/creator/quickstart-guide/pages.png>

Example C — Embedded Report: Zoho shows how a Report is selected and embedded into a Page.

Official image: <https://www.zohowebstatic.com/sites/zweb/images/creator/quickstart-guide/report-pages-zoho-creator.png>

Example D — Chart configuration: Zoho's real builder shows the form, X-axis category, Y-axis aggregate and count-of-records settings for a bar chart.

Official image: <https://www.zohowebstatic.com/sites/zweb/images/creator/quickstart-guide/configure-chart-types-zoho-creator.png>

Example E — Page Builder with KPI-style panels: Zoho's Page Builder screenshot shows panels and the left-side component list.

Official image: <https://www.zohowebstatic.com/sites/zweb/images/creator/quickstart-guide/panels-pages-zoho-creator.png>

Zoho's current Page Builder documentation confirms that pages support components such as panels, boards, charts, gauges, search, embedded forms/reports, snippets, buttons and widgets. ■cite■turn0search0■turn0search4■

6. What to Screenshot for Your Lab Record

Take screenshots in this order so your record is easy to assemble:

1. Page Builder showing the complete Hotel_Command_Center_Page with all 11 elements.
2. Gauge showing sample occupancy data.
3. Room-type bar chart showing sample booking counts.
4. Board before dragging a booking.
5. Board after dragging the booking to another status.
6. Viewer displaying a sample guest ID document.
7. Final live page showing the full command center.

The assignment specifically requires the full Page Builder view, live Gauge and Chart data, a before/after Board drag-and-drop interaction, and a working Viewer displaying a sample ID document. ■filecite■turn5file0■L212-L218■

7. Quick Final Checklist

- Hotel_Command_Center_Page created
- Command_Center_Main_Panel added
- Occupancy_Rate_Gauge added
- RoomType_Popularity_Chart_Widget added
- Guest_Search_Bar added
- Send_Checkin_Reminder_Button added
- Booking_Status_Board added with 4 status columns
- Full_Bookings_Report added
- Hotel_Policy_Snippet added
- Guest_ID_Document_Viewer added
- Quick_Walkin_Booking_Form added
- Housekeeping_And_Arrivals_Widgets added
- Screenshots captured for final lab record
